

ELIMINATE SURVEY DEFICIENCIES.

Save thousands. Increase resident satisfaction.

○ MxManage QUALITY STAT

MxManage *Quality Stat* is a user-friendly web-based tool that requires no new software. The 2008 version is the only automated tool that **identifies F tags at risk** for survey noncompliance. The *Quality Stat* module of MxManage pinpoints areas for quality improvement, and provides real-time monitoring of quality benchmarks by identifying survey targets prior to survey.

○ What it does.

MxManage will help you create a more targeted, more individualized, and more accurate care planning system. Your new system will be more efficient, and will allow nurses to spend less time in meetings and more time doing what they're really there for — helping residents.

○ How it helps.

MxManage can help eliminate your:

- Survey deficiencies
- Banned admissions
- Fines
- Costly litigation
- Facility closures

Targeted care plans will lead to increased accuracy, contribute to increased Medicare reimbursement, as well as improve resident satisfaction.

The quality & reimbursement tool

Problem

An urban skilled nursing facility in Michigan had a history of problems with its quality of care. The facility regularly incurred substantial fines for survey deficiencies.

Solution

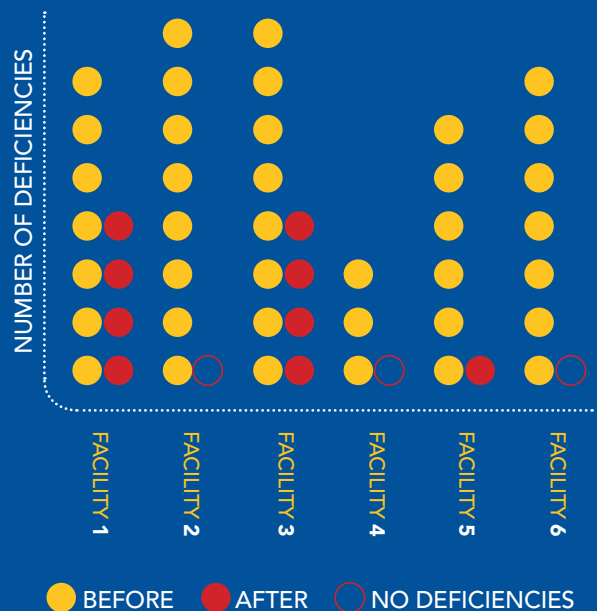

A new director of nursing introduced MxManage to the facility. MxManage *Quality Stat* identified specific at-risk residents, as well as major high-risk problems throughout the whole facility, like weight loss and pressure ulcers. *Quality Stat* became an integral part of care plan meetings, and the QA committee's primary tool for **identifying and monitoring at-risk F tags.**

Results

MxManage *Quality Stat* eliminated deficiencies and saved thousands:

- *Quality Stat* identified risks and residents at risk based on MDS results — information the staff used to deliver better care.
- After implementing *Quality Stat*, the facility reduced their deficiencies in state surveys from an average of ten to zero. A deficiency-free survey rating translates to savings of thousands of dollars in fines.
- The facility now has resident satisfaction survey results above the statewide average.
- *Quality Stat* made new targeted care plans possible, increasing accuracy and contributing to increased Medicare census and higher reimbursement.

REDUCTION IN SURVEY DEFICIENCIES:

In every one of these facilities that introduced MxManage, deficiencies were reduced while Medicare reimbursement increased.

In fact, 3 out of 6 facilities eliminated deficiencies all together.
